SPEECH THERAPY
Assistant

Speech Therapy Assistants (STAs) work under the guidance of a Speech Pathologist to provide highly effective, **goal-focused** practice between therapy sessions.

The Speech Pathologist **tailors a personalised program** for the STA to follow, ensuring it aligns with the client's goals.

Progress in therapy requires frequent, focused practice— which can be hard to do at home. STAs make it easier by offering flexible, engaging sessions tailored to each client's goals.

Working with an STA is an **effective and affordable** way to deliver therapy and build lasting skills.
